<http://103.230.85.93/diy/Airplane-Piggy-Bank>

Supplies:

- Plastic bottle, washed, dried, and label removed.
- Printer paper
- Cardstock or construction paper, various colors
- Scissors
- Double sided tape or glue

Instructions:

1. Print the plane's body template. Fold the printer paper in half, short sides together. Keep the paper folded and cut on the black lines.
2. Wrap the body piece around the bottle. Glue the tail sections together, then glue or tape the rest of paper together where the two ends overlap.
3. From the construction paper cut two 2x5 inch rectangles. Glue the short ends of a rectangle together to form a tube. Repeat with the other rectangle. Glue or tape them to the sides of the bottle. These will be the airplane's engines.
4. Cut out the wings. Glue the larger wings over the engines and the smaller wings on the sides of the tail section.
5. Cut out circles from the construction paper and glue them along both sides of the bottle to make the planes windows.
6. Cut out the propeller and put it under the bottle cap.
7. Ask an adult to cut a rectangle, about an inch long, in the top of the airplane.
8. Start saving in your new bank!
